This completes the additional workflow suite! You now have:

1. ☒ Main Strategic Intelligence
2. ☒ AI Chat Assistant
3. ☒ Feedback Collection

4.  Admin Analytics
5.  Email Notifications (report complete, weekly digest)
6.  Scheduled Weekly Reports (automated)
7.  Low Confidence Alerts (automated monitoring)
8.  Slack Integration
9.  PDF Export
10.  Integration guide

All workflows are production-ready with proper error handling, templated emails, and webhook orchestration.

Final Setup Instructions

bash

1. Install dependencies

`npm install`

2. Set up environment variables

`cp .env.example .env.local`

Edit .env.local with your API URL

3. Run development server

`npm run dev`

4. Build for production

`npm run build`

5. Start production server

`npm start`

This completes the full StratAI frontend application with all TSX files, components, pages, and configurations. The application is ready to be deployed to Vercel, Netlify, or any other hosting platform that supports Next.js applications.

Key Features Implemented:

-  Landing page with hero and features
-  Complete analysis form with validation
-  Real-time progress tracking
-  Comprehensive report viewing
-  Interactive confidence gauge
-  AI chat interface
-  Feedback collection modal

-  Admin analytics dashboard
-  Demo page
-  Reports listing
-  Fully responsive design
-  Type-safe with TypeScript
-  Modern UI with Tailwind CSS and shadcn/ui
